

Before login, both logistic company user and client user can check the short user manual and the information of the development team at the home page, see available ports on a world map and click the highlighted button to login to the management system.

When a logistic user is logged in, he/she will be directly sent to the Logistics Page, where new clients and managers(logistic users) can be added, the number of clients can be checked out and the button to lead to the client search page is available. On the Logistics Board, the user is also able to manage journeys, assign containers to different ports, view coordinates of available ports and check the profile.

A person who cannot login should also be able to see the journey information by entering the URL of the journey.

At the page of client search for logistic users, the user can see the list of clients and search clients based on simple criteria.

Shipment URL

Client Management

Search all your clients

Criteria

Username	First Name	Last Name	Email	Company Name
Renjue	Renjue	Sun	mengajzoees@gmail.com	DTU

At the Ports item on the Logistics Board, all the available ports are displayed and if the logistic user wants to assign containers to a specific port, he/she just needs to click on the port he/she would like to operate. This operation will lead the user to the page of container information.

Containers at port Shanghai

1

ID	History Count	Status

At the page of container information for logistic users, the user can register new containers to a specific port and every container will have a unique ID.

Journey Management

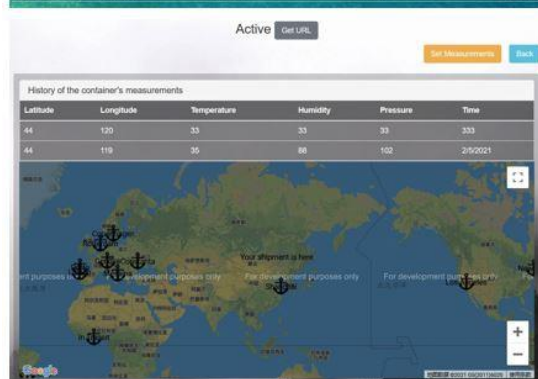

Search all your Journeys

Criteria

Journey List

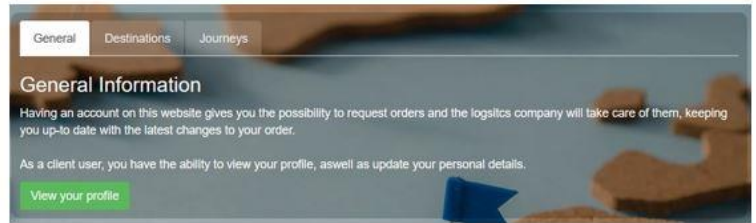

User	Origin	Destination	Content type	Cargo	Status
Renjue	Shanghai	Copenhagen	Food	Lee	Active
Renjue	Sydney	Lisbon	Fragile	glasses	Waiting for approval

At the journey page for logistic users, the user can search journeys based on simple criteria and check the list of journeys. The journey can also be approved by clicking the specific entry to the page of journey information.

At the page of journey information for logistic users, the user can acquire a URL to share with other people, set measurements about the container's internal status along the journey and see the history of different measurements.

When a client user is logged in, he/she will be directly sent to the Client Page, where his/her profile can be viewed, all available ports will be displayed under destinations item and the process of his/her journeys can be tracked.

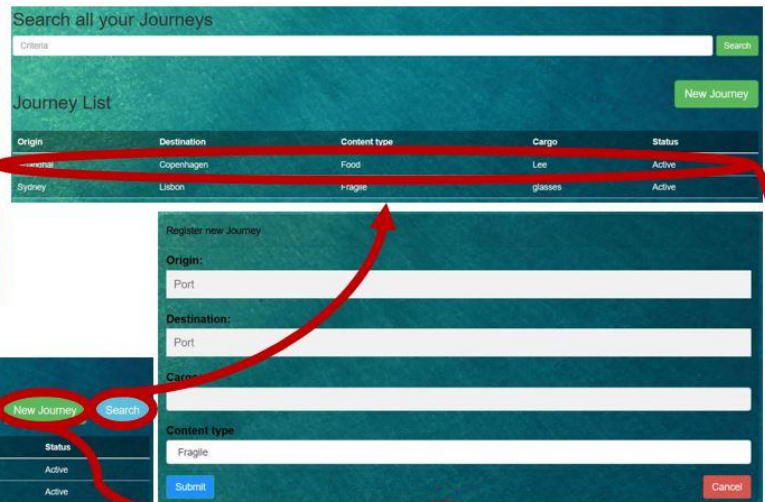

Profile Management

When clicking on the button to view the profile under General item on the Client Board, the user should be led to the page where the client's profile can be both viewed and edited.

Journey Management

When client user clicks to see the management page under Journey item on Client Board, he/she will be able to search journeys and register new journeys. The client user can also have access to the page of journey information where the shipment is located on the world map and all the measurement history is available. The client can also get the URL of the journey and send it to other people.
